

32-2959: CDK2AP2 Recombinant Protein

Alternative Name : Cyclin-dependent kinase 2-associated protein 2,CDK2-associated protein 2,DOC-1-related protein,DOC-1R,CDK2AP2,DOC1R,p14.

Description

Source : Escherichia Coli. CDK2AP2 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 149 amino acids (1-126 a.a) and having a molecular mass of 15.5kDa.CDK2AP2 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Cyclin-Dependent Kinase 2 Associated Protein 2 (CDK2AP2) is a member of the CDK2AP family. CDK2-associated protein is assumed to negatively regulate CDK2 activity by sequestering monomeric CDK2, and targeting CDK2 for proteolysis. CDK2AP2 is implicated in the regulation of self-renewal of stem cells during early embryogenesis. CDK2AP2 is a regulator for self-renewal of mESCs (mouse embryonic stem cells) under permissive conditions, and cell survival during differentiation of the mESCs into terminally differentiated cell types.
