

32-3860: GAGE2A Recombinant Protein

Alternative Name : G Antigen 2A,G Antigen 2A/2B,Cancer/Testis Antigen Family 4,Cancer/Testis Antigen Family 4,Member 2,GAGE-2A,Member 2,CT4.2,GAGE-2.

Description

Source : Escherichia Coli. GAGE2A Human Recombinant produced in E.coli is a single, non-glycosylated polypeptide chain containing 139 amino acids (1-116) and having a molecular mass of 15.0kDa. GAGE2A is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. GAGE2A is a member of a multigene family expressed in a large variety of tumors while in normal tissues; expression is limited to germ cells. These genes organized in clustered repeats, have a high degree of predicted sequence identity, however differ by scattered single nucleotide change. Their sequences have either the antigenic peptide YRPRRRY or YYWPRRRY which is recognized by cytotoxic T-cells.
