32-5041: Recombinant Human Tubulin Folding Cofactor C

Alternative Name: Tubulin folding cofactor C,tubulin-specific chaperone c,Tubulin-folding cofactor C,CFC.

Description

Source: E.coli. TBCC Human Recombinant produced in E. coli is a single polypeptide chain containing 369 amino acids (1-346) and having a molecular mass of 41.7 kDa.TBCC is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Tubulin folding cofactor C (TBCC) is a member of the TBCC family. TBCC has a role in the control of centrosome and Golgi apparatus positioning, with effects on cell shape and cell migration. Cofactor C is 1 of 4 proteins (cofactors A,D,E and C) engaged in the pathway leading to properly folded b-tubulin from folding intermediates. Cofactor E attaches to the cofactor D/beta-tubulin complex; their interaction with cofactor C subsequently causes the release of beta-tubulin polypeptides which are bound to the native state.

Product Info

Amount: 10 µg

Purification: Greater than 85% as determined by SDS-PAGE.

The TBCC solution (0.5mg/1ml) contains 20mM Tris-HCl buffer (pH 8.0), 100mM NaCl, 1mM DTT Content:

and 10% glycerol.

Store at 4°C if entire vial will be used within 2-4 weeks. Store, frozen at -20°C for longer periods of Storage condition:

time. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid

multiple freeze-thaw cycles.

Amino Acid: MGSSHHHHHH SSGLVPRGSH MGSMESVSCS AAAVRTGDME SQRDLSLVPE RLQRREQERQ
