36-11077: Monoclonal Antibody to Golgi Complex (Marker for Human Cells)(Clone : AE-6)

Clonality: Monoclonal

Clone Name: AE-6

Application: FACS,IF,WB,ICC,IHC

Reactivity: Human Format: Purified

Isotype: Mouse IgG1, kappa

Immunogen Information: SU-DHL-1 large cell lymphoma cells

Description

This MAb recognizes an antigen associated with the Golgi complex in human cells only. It can be used to stain the Golgi complex in cell or tissue preparations and can be used as a Golgi marker in subcellular fractions. It produces a diffuse staining pattern of the Golgi zone in normal and malignant cells. This MAb is an excellent marker for human cells in xenographic model research. It reacts specifically with human cells. The Golgi apparatus is an organelle present in all eukaryotic cells that forms a part of the endomembrane system. The primary function of the Golgi apparatus is to process and package macromolecules synthesized by the cell for exocytosis or use within the cell. The Golgi is made up of a stack of flattened, membrane-bound sacs known as cisternae, with three functional regions: the cis face, medial region and trans face. Each region consists of various enzymes that selectively modify the macromolecules passing though them, depending on where they are destined to reside. Several spherical vesicles that have budded off of the Golgi are present surrounding the main cisternae.

Product Info

Amount : 100 μg

Purification: Affinity Chromatography

Content: 100 μg in 500 μl PBS containing 0.05% BSA and 0.05% sodium azide. Sodium azide is highly

toxic.

Storage condition:

Storage condition:

Store the antibody at 4°C; stable for 6 months. For long-term storage; store at -20°C. Avoid

repeated freeze and thaw cycles.

Application Note

Flow Cytometry (0.5-1.0ug/million cells);Immunofluorescence (1-2ug/ml); Western Blot (1-2ug/ml);Immunocytochemistry (Acetone or paraformaldehyde fixed) (1-2ug/ml for 30 min);Immunohistochemistry (Formalin-fixed) (1-2ug/ml for 30 minutes at RT)(Staining of formalin-fixed tissues requires heating tissue sections in 10mM Tris with 1mM EDTA, pH 9.0, for 45 min at 95°C followed by cooling at RT for 20 minutes);

Formalin-fixed, paraffin-embedded human Pancreas stained with Golgi Monoclonal Antibody (AE-6).
