immunogen for this antibody.

Description

HSPD1 (heat shock 60 kDa protein 1 (chaperonin)) is a member of the chaperonin family of proteins. Chaperonin may function as a signaling molecule in the innate immune system and is essential for the folding and assembly of newly imported proteins in the mitochondria implicated in mitochondrial protein import and macromolecular assembly. Diseases associated with HSPD1 include spastic paraplegia 13. It exists in two isoforms comprised of 573 amino acids. Chaperonin is expressed in adipose tissue, adrenal cortex, adrenal gland, blood and brain.
