

32-2345: GALM Recombinant Protein

Alternative Name : Aldose 1-epimerase,BLOCK25,IBD1,EC=5.1.3.3,GALM,galactose mutarotase.

Description

Source : Escherichia Coli. GALM Recombinant Human produced in E.Coli is a single, non-glycosylated polypeptide chain containing 362 amino acids (1-342 a.a.) and having a molecular mass of 39.9 kDa. The GALM is fused to 20 amino acid His-Tag at N-terminus and purified by proprietary chromatographic techniques. GALM is a main enzyme of carbohydrate metabolism catalysing the translation of beta-D-galactose to alpha-D-galactose. GALM is needed for normal galactose metabolism by preserving the equilibrium of alpha and beta anomers of galactose. GALM is required for the production of complex oligosaccharides.
