32-2428: HARS Sf9 Recombinant Protein

Alternative Name: Histidyl-tRNA synthetase,EC 6.1.1.21,Histidine-tRNA ligase,HisRS,HRS,FLJ20491,JO-1.

Description

Source: Sf9 Insect Cells. Histidyl-tRNA Synthetase Human Recombinant produced in baculovirus is a single, glycosylated, polypeptide chain having a molecular mass of 58.3 kDa. The Histidyl-tRNA Synthetase is fused to 6x His Tag and purified by proprietary chromatographic techniques. Aminoacyl-tRNA synthetases are a class of enzymes that charge tRNAs with their cognate amino acids. The protein encoded by this gene is a cytoplasmic enzyme which belongs to the class II family of aminoacyl-tRNA synthetases. The enzyme is responsible for the synthesis of histidyl-transfer RNA, which is essential for the incorporation of histidine into proteins. The gene is located in a head-to-head orientation with HARSL on chromosome five, where the homologous genes share a bidirectional promoter. The gene product is a frequent target of autoantibodies in the human autoimmune disease polymyositis/dermatomyositis.

Product Info

Amount: $25 \mu g$

Purification: Greater than 90.0% as determined by SDS-PAGE.

Content: The protein solution contains 20mM HEPES, 250mM sodium chloride 0.1% and 20% Glycerol, (pH

7.5).

Storage condition:

Histidyl-tRNA Synthetase although stable at 4°C for 3 weeks, should be stored below

-18°C.Please prevent freeze-thaw cycles.
