32-2735: Protease Recombinant Protein

Description

Source: Escherichia Coli.

Product Info

Content:

Amount: 150 IU

Protease Recombinant is a fusion protein of glutathione S-transferase (GST) and human

rhinovirus (HRV) type 14 3C protease. The protease specifically recognizes a subset of sequences which include the core amino acid sequence Leu-Phe-Gln/Gly-Pro cleaving between the Gln and Gly residues. Substrate recognition and cleavage are likely to be dependent not only upon primary

structural signals, but also upon the secondary and tertiary structures of the fusion protein as well.

The Recombinant Protease is purified by proprietary chromatographic techniques.

Storage condition:

Protease Recombinant although stable at 4°C for 1 week, should be stored desiccated below

-18°C. Please prevent freeze thaw cycles.
