

32-3536: CHRAC1 Recombinant Protein

Alternative Name : CHARC1,CHARC15,CHRAC-1,CHRAC-15,CHRAC15,YCL1,Chromatin accessibility complex protein 1,Chromatin accessibility complex 15 kDa protein,DNA polymerase epsilon subunit p15.

Description

Source : E.coli. CHRAC1 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 154 amino acids (1-131 a.a.) and having a molecular mass of 17.1kDa. CHRAC1 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Chromatin Accessibility Complex 1 (CHRAC1) is a histone-fold protein which interacts with further histone-fold proteins to bind DNA in a sequence-independent mode. These histone-fold protein dimers combine within larger enzymatic complexes for DNA replication, transcription, and packaging.
