

32-3566: COA4 Recombinant Protein

Alternative Name : CHCHD8,CMC3,E2IG2,Cytochrome c oxidase assembly factor 4 homolog,mitochondrial,Coiled-coil-helix-coiled-coil-helix domain-containing protein 8,E2-induced gene 2 protein,COA4.

Description

Source : Escherichia Coli. COA4 Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 110 amino acids (1-87 a.a) and having a molecular mass of 12.5kDa. COA4 is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Cytochrome c oxidase assembly factor 4 (COA4) is the last enzyme of the mitochondrial respiratory chain which needs a great number of accessory factors. COA4 is vital for oxidative phosphorylation and comprises multiple complexes including cytochrome c oxidase, assembled in macromolecular supercomplexes. COX4 is a protein-coding gene which defect in it causes an acute human encephalomyopathies.
