Description

Source : Escherichia Coli. POLR1C Human Recombinant produced in E.Coli is a single, non-glycosylated polypeptide chain containing 369 amino acids (1-346 a.a.) and having a molecular mass of 41.6kDa.POLR1C is fused to a 23 amino acid His-tag at N-terminus & purified by proprietary chromatographic techniques. Polymerase (RNA) I (DNA directed) Polypeptide C (POLR1C) is a subunit of both RNA polymerase I and RNA polymerase III complexes whose defects are related with Collins syndrome. POLR1C is a protein-coding gene and is part of the Pol core element
