

32-5408: Recombinant Chlamydia Trachomatis HSP70 (549-660)

Description

Source : Escherichia Coli. The E.coli derived recombinant protein contains Chlamydia Trachomatis HSP70 protein epitopes, 549-660 amino acids. Chlamydia is a common term for infection with any bacterium belonging to the phylum Chlamydiae. This term derives from the name of the bacterial genus Chlamydia in the family Chlamydiaceae, order Chlamydiales, class and phylum Chlamydiae. There are two genera in Chlamydiaceae: Chlamydia and Chlamydophila. The genus Chlamydia includes three species: C. trachomatis, C. muridarum, and C. suis.

Product Info

Amount :	0.5 mg
Purification :	Chlamydia HSP70 protein is >95% pure as determined by 10% PAGE (coomassie staining) and RP-HPLC.
Content :	50mM Tris-HCl, pH 8.0, 8M Urea, 60mM NaCl and 50% glycerol.
Storage condition :	Chlamydia HSP70 protein although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.
