Description

Target: IL-1 Beta

Generic name: Canakinumab

Product Origin: Recombinant in CHO cells

Canakinumab is a recombinant, human anti-human-IL-1 β monoclonal antibody that belongs to the IgG1/ κ isotype subclass with a molecular mass of 145157 Daltons when deglycosylated. Canakinumab binds to human IL-1 β and neutralizes its inflammatory activity by blocking its interaction with IL-1 receptors, but it does not bind IL-1 α or IL-1 receptor antagonist (IL-1ra).
